HIGH VISIBILITY CABIN

Work conditions and long hours can be tough on operators, but through smart design, the state-of-the-art operator cabin on Hyster® lift trucks is equipped to keep your operators comfortable and productive throughout a shift.

Equipped with an armoured glass top window, curved front and rear windows and steel doors with tempered glass, the Hyster operator cabin provides operators excellent all-around visibility. The curved and tempered glass is much stronger and less subject to vibration and noise than flat glass. Unlike many cabs offered in the industry, the Hyster cab contains scratch-resistant glass all-around.

WE KNOW OPERATOR COMFORT

A variety of seat configurations are offered to suit operator preference including mechanical or air suspension, cloth or vinyl cover, lumbar support and ventilated or heated seats.

The **Operator Cabin on the XD series** is equipped with many features as standard and a host of other optional features to help enhance operator comfort and productivity.

Operators can stay connected and charged with up to 2 USB Ports located in the control arm and behind the seat with an AC/DC power outlet.

The control arm features an ergonomic wrist cushion and is fully adjustable to the operator's preference. Modular in design, it can accommodate almost any possible configuration and is easily serviceable.

Forward and reverse control is also available through the optional ergonomically designed joystick, which can be integrated in the control arm for easy and intuitive operation of hydraulic functions.

ADAPTABLE TO YOUR OPERATOR NEEDS

With the largest cabin entry area in the industry, the Hyster cabin provides ample space for operators of most sizes to easily and more comfortably enter and exit the cabin. Once inside, operators enjoy the comfort of a spacious cockpit style cabin that keeps all truck information and controls within reach.

The industry exclusive lateral seat slider accommodates an extra seat for trainers to supervise performance. The adjustable steer column uses a unique foot pedal design that allows operators to keep hands on the wheel while finding the right operating position.

A 7 inch full-color Integrated Performance Display provides truck performance data in one clear screen. This multi-function touchscreen gives the most relevant information to the operator in a clear manner, offers onboard diagnostic capabilities, and is easily programmable and customizable for various operator skill levels.

The air conditioning system can be pre-set for automatic climate control, as well as easily adjusted through the Integrated Performance Display or from the panel on the control arm. The unique high and rear louvers provide direct air flow toward the operator.
